Attention: Mr. Wayne Gustafson

Dear Sir:

Re: Geotechnical Investigation - McLevins Site
Lots NE 21-39-26-W4M, Lacombe County, AB

In response to your request, Parkland Geotechnical Consulting Ltd. (ParklandGEO) has reviewed our files for the property referred to above. About one year ago we did several test pits on the property looking into the quality of granular resources (sand and gravel) on the property. The quality of the material was variable. However, in terms of potential development and use of the subgrade for private sewage disposal in septic fields would be difficult for most, if not all of the site, without modification. Based on our understanding of the site subsurface conditions, alternate engineering methods of disposal such as engineered fields and/or mounds or treatment to reduce effluent to grey water before discharge will be required for this site.

CLOSURE

Parkland Geotechnical Consulting Ltd. looks forward to working with you on this project. If you have any questions or comments regarding the information above, please do not hesitate to contact the undersigned.

Respectfully submitted,
PARKLAND GEOTECHNICAL CONSULTING LTD.
A.P.E.G.G.A. Permit #07312
