41.01%

INTEREST IN MUNICIPAL OFFICE
1.43

Note: The Municipal Indicator Dashboard uses a broad range of data collected by Municipal Affairs; and includes financial, governance and community inputs that are derived from information provided by municipalities through their audited financial statements, municipal election results, population affidavits as well as a count of instances whereby the Minister was required to intervene.

Each indicator has a defined benchmark. If a municipality fails to achieve that benchmark, the values are displayed in "red." A value of "N/A" means the municipality has been excluded from that indicator. A municipality is deemed to be "at risk" if it triggers one critical indicator (Audit Outcome or Ministry Intervention) or three or more of the remaining eleven non-critical indicators. For detailed information regarding indicators and results, please refer to the annual [Municipal Indicator Results](#).
